Internet Connectivity

- Extremely well connected to the core internet (terrestrial and submarine cables).
- Low latency to other major internet hubs.
- Linking Northern Europe with North America.
- Redundant fibre-optic connections.

DATA CENTER SITES IN BUSINESS REGION ESBJERG EXAMPLES

BULK'S DK01 CAMPUS, ESBJERG

A SCALABLE CARRIER NEUTRAL COLOCATION DATA CENTER

Mayor of Esbjerg Kommune, Jesper Frost Rasmussen - Founder and chairman of Bulk Infrastructure, Peder Nærbø - Commercial Manager at Business Esbjerg, Karsten Rieder

"This location forms the perfect place for us to enable this neutral traffic exchange point in Denmark. We look forward to establishing good relations in the Danish market as well as the international market who wants a central location within the EU... We are impressed with the local skills available in the community and the excellent support from Esbjerg Municipality and Invest in Denmark"

- Peder Nærbø, founder and chairman of Bulk Infrastructure

Bulk's DK01 Campus, Esbjerg, southwest Denmark, will be a scalable Carrier Neutral Colocation data center ready for customers Q4 2019. Esbjerg is becoming a highly strategic data center location with several subsea fiber systems terminating within or nearby. These include Havfrue (US, Ireland, Norway, Denmark), Havhingsten (Ireland, Denmark), Cobra (Holland, Denmark), Skagerrak 4 (Norway Denmark), DANICE (Iceland, Denmark) and TAT-14 (United Kingdom, France, the Netherlands, Germany, and Denmark).

Combined with excellent terrestrial connectivity, this will make Esbjerg the main international entry point to the Nordics and enable the Bulk DK01 campus to be the natural traffic exchange point.
